Beam

Get paid as an African.

Not another app for sending money home — a real payments platform for getting paid, paying abroad, and hiring across borders, in whatever currency you've got.

Built on the Blaaiz API · Blaaiz Buildathon · GDG Ilorin

THE PROBLEM

Amara is a designer in Lagos. Her client in Austin just paid her $400 in USDT.

Now she needs that in naira. She bounces between a crypto exchange, a P2P trader, and her bank app — losing time and money at every hop, with no idea what rate she'll actually land on.

01 **Every "cross-border money" app solves the other direction**
LemFi, NALA, Afriex — billions raised, all built for sending money *into* Africa.

02 **Nobody's building for getting paid *as* an African**
Freelancers, SMEs, and gig workers earning in crypto or USD have no clean way to cash out.

THE GAP BLAAIZ ITSELF NAMED

That's not our framing. It's Blaaiz's own thesis.

> *"Most remittance companies only let you send money to Africa — but what about getting paid as an African?"*
>
> — Blaaiz founder

We built Beam to be exactly that answer — on top of the infrastructure Blaaiz already built to make it possible.

THE SOLUTION

One platform. Three real flows.

Whatever currency you have, or whatever currency you're owed — Beam handles the conversion.

Instant payout

Get paid in crypto or USD — cash out in your own currency in minutes.

Pay abroad

Holding naira in Lagos, buying something in Accra? Pay in what you have — they get cedis, automatically.

Escrow for hiring

A client funds the job in crypto. Beam holds it until work is done, then releases it in one click.

REAL INFRASTRUCTURE, NOT A MOCKUP

Every screen you'll see runs on the real Blaaiz API.

- **Crypto collections**
  Real USDT/USDC deposit addresses, generated live on Ethereum, BSC, Tron, and Polygon.
- **Live FX & fees**
  Every rate and fee breakdown is a real-time quote from Blaaiz — never a guess.
- **Multi-rail payouts**
  Bank transfer, mobile money, and ACH — across Africa, Europe, and North America.

WHY NOW

This rail is already massive — and legitimizing.

~60%

of Sub-Saharan Africa's stablecoin inflows run through Nigeria

$59B

in crypto inflows to Nigeria, Jul 2023–Jun 2024 (IMF)

0 → 1

Nigeria's SEC is formalizing this rail — sandbox + naira stablecoin, cNGN

Let's see it live.

→ switching to the real app, real API, real payout

Beam — whatever currency you have, whatever currency you're owed.
One platform, real infrastructure. Thank you.
